

# HW 04 SOLUTIONS

## Practice Problems

### 3.15

- a.  $p(0) = P(Y = 0) = (.48)^3 = .1106$ ,  $p(1) = P(Y = 1) = 3(.48)^2(.52) = .3594$ ,  
 $p(2) = P(Y = 2) = 3(.48)(.52)^2 = .3894$ ,  $p(3) = P(Y = 3) = (.52)^3 = .1406$ .
- b. The graph is omitted.
- c.  $P(Y = 1) = .3594$ .

### 3.21

Note that  $E(N) = E(8\pi R^2) = 8\pi E(R^2)$ . So,  $E(R^2) = 21^2(.05) + 22^2(.20) + \dots + 26^2(.05) = 549.1$ . Therefore  $E(N) = 8\pi(549.1) = 13,800.388$ .

### 3.31

- a. The mean of  $W$  will be larger than the mean of  $Y$  if  $\mu > 0$ . If  $\mu < 0$ , the mean of  $W$  will be smaller than  $\mu$ . If  $\mu = 0$ , the mean of  $W$  will equal  $\mu$ .
- b.  $E(W) = E(2Y) = 2E(Y) = 2\mu$ .
- c. The variance of  $W$  will be larger than  $\sigma^2$ , since the spread of values of  $W$  has increased.
- d.  $V(X) = E[(X - E(X))^2] = E[(2Y - 2\mu)^2] = 4E[(Y - \mu)^2] = 4\sigma^2$ .

### 3.37

- a. Not a binomial random variable.
- b. Not a binomial random variable.
- c. Binomial with  $n = 100$ ,  $p =$  proportion of high school students who scored above 1026.
- d. Not a binomial random variable (not discrete).
- e. Not binomial, since the sample was not selected among all female HS grads.

### 3.39

Let  $Y =$  number of components failing in less than 1000 hours. Then  $Y \sim \text{Binomial}(n = 4, p = .2)$ .

- a.  $P(Y = 2) = \binom{4}{2}(.2)^2(.8)^2 = 0.1536$ .
- b. The system operates if 0, 1, or 2 components fail.  $P(\text{system operates}) = .4096 + .4096 + .1536 = .9728$ .

### 3.51

- a.  $P(\text{at least one 6 in four rolls}) = 1 - P(\text{no 6's in four rolls}) = 1 - (5/6)^4 = 0.51775$ .
- b. In a single toss of two dice,  $P(\text{double 6}) = 1/36$ . Then  $P(\text{at least one double 6 in 24 rolls}) = 1 - P(\text{no double 6's in 24 rolls}) = 1 - (35/36)^{24} = 0.4914$ .

### 3.55

We use the identity

$$\begin{aligned} E[Y(Y-1)(Y-2)] &= \sum_{y=0}^n \frac{y(y-1)(y-2)n!}{y!(n-y)!} p^y (1-p)^{n-y} \\ &= \sum_{y=3}^n \frac{n(n-1)(n-2)(n-3)!}{(y-3)!(n-3-(y-3))!} p^y (1-p)^{n-y} \\ &= n(n-1)(n-2)p^3 \sum_{z=0}^{n-3} \binom{n-3}{z} p^z (1-p)^{n-3-z} \\ &= n(n-1)(n-2)p^3 \end{aligned}$$

Equating this to  $E(Y^3) - 3E(Y^2) + 2E(Y)$ , it is found that  $E(Y^3) = 3n(n-1)p^2 - n(n-1)(n-2)p^3 + np$ .

### 3.59

If  $Y$  = number of defective motors, then  $Y \sim \text{Binomial}(n = 10, p = .08)$ . Then  $E(Y) = .8$ . The seller's expected net gain is  $1000 - 200E(Y) = 840$ .

## Submitted Problems

### 3.12

$$E(Y) = 1(.4) + 2(.3) + 3(.2) + 4(.1) = 2.0$$

$$E(1/Y) = 1(.4) + \frac{1}{2}(.3) + \frac{1}{3}(.2) + \frac{1}{4}(.1) = 0.6417$$

$$E(Y^2 - 1) = E(Y^2) - 1 = [1^2(.4) + 2^2(.3) + 3^2(.2) + 4^2(.1)] - 1 = 5 - 1 = 4$$

$$V(Y) = E(Y^2) - [E(Y)]^2 = 5 - 2^2 = 1$$

### 3.20

With probability 0.3 the volume is  $8 \cdot 10 \cdot 30 = 2400$ .

With probability 0.7 the volume is  $8 \cdot 10 \cdot 40 = 3200$ .

Mean =  $0.3(2400) + 0.7(3200) = 2960$

### 3.22

$p(y) = P(Y = y) = 1/6$  for  $y = 1, 2, \dots, 6$ .

So  $E(Y) = 3.5$  and  $V(Y) = 2.9167$ .

### 3.24

Distribution of  $Y$  = number of bottles with serious flaws:

$y$	0	1	2
$p(y)$	0.81	0.18	0.01

Thus  $E(Y) = 0(.81) + 1(.18) + 2(.01) = 0.20$  and

$$V(Y) = 0^2(.81) + 1^2(.18) + 2^2(.01) - (0.20)^2 = 0.18$$

**3.30**

- a. Mean of  $X$  is larger than mean of  $Y$ .
- b.  $E(X) = E(Y + 1) = E(Y) + 1 = \mu + 1$ .
- c. Variances of  $X$  and  $Y$  are the same.
- d.  $V(X) = E[(X - E(X))^2] = E[(Y + 1 - \mu - 1)^2] = E[(Y - \mu)^2] = \sigma^2$

**3.44**

Let  $Y$  = number of successful operations,  $Y \sim \text{Binomial}(n = 5, p)$

- With  $p = 0.8$ :  $P(Y = 5) = 0.8^5 = 0.328$
- With  $p = 0.6$ :  $P(Y = 4) = 5(0.6^4)(0.4) = 0.259$
- With  $p = 0.3$ :  $P(Y < 2) = P(Y = 1) + P(Y = 0) = 0.528$

**3.58**

If  $Y \sim \text{Binomial}(n = 4, p = 0.1)$ :

$$E(Y) = 0.4, V(Y) = 0.36, \text{ so } E(Y^2) = 0.36 + (0.4)^2 = 0.52$$

$$\text{Then } E(C) = 3(0.52) + (0.36) + 2 = 3.96$$
